

ASPHALT

Through The Ages

1900-1909

Warren Brothers placing a seal coat on new asphalt concrete. At right, applying asphalt, asphalt boilers in center, applying hot chips left center, finish rolling left and completed pavement under traffic in background.

Pavement preservation

techniques are gaining

widespread usage as

owners recognize the

benefits of protecting their

investment. The origins of

many of today's materials

and equipment can be seen

in these photos of early

highway applications.

1935

Broom drag on surface treatment of 1935 Maryland project.

1936

Spraying asphalt for surface treatment of 1936 New York job.

1937

Heater-Planer working on existing pavement in 1937.

1909

Spreading aggregate for a hot seal coat surface treatment on a Michigan project.

1940
Spreading fine aggregate screenings on Route 3 in Grand Canyon County, Ariz. in the 1940s.
